- 80 * 80
- 90 * 180

Also, the products of our company have a variety of different colors. Among these colors, we can mention black, blue, yellow, white, and so on.

Porcelain tiles

Porcelain tiles are produced at high temperatures. It has high density and is very strong.

Cement tiles

Cement body tiles are first poured into the mold and then dried by heat or naturally. To color this type of tile, paint is used in its raw material. This type of tile is sealed after installation.

Mosaic tiles

These types of tiles are made in two types of porcelain or ceramic and its size is 2.5 cm. These tiles are installed individually or collectively. These types of tiles are available in two types, glazed and unglazed.

Pavement tiles

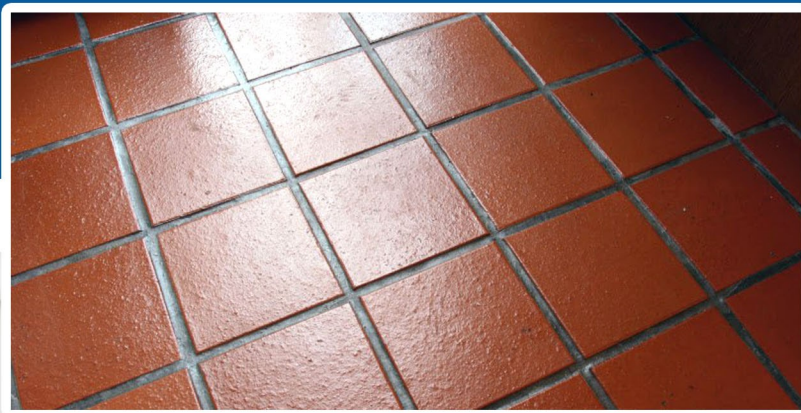

These tiles look almost like bricks, but they are not thick. These tiles are used for floors, patios and sometimes bathrooms and do not need to be sealed.

Glazed tiles

After making the glaze tiles, a glass surface is added in order to make it shinier and easier to clean. These tiles are used for bathrooms, toilets, kitchens walls and one of the advantages of these tiles is the diversity of designs and colors.

Mineral tiles

These tiles are mostly used in trading centers because they are durable and cheaper than other models. This tile has red and orange colors.

A large, colorful geometric pattern of Mexican tiles in the top right corner, featuring various floral and abstract designs in blue, red, yellow, and green. The tiles are arranged in a diamond grid.

Mexican tiles

These tiles are not baked and are dried naturally exposed to the air. The appearance of this tile gives you an interesting feeling.

Ceramic tiles

Ceramic tiles are usually made of clay or similar minerals. All production of this tile are performed through heating. These tiles are also glazed and unglazed.

Types of ceramics

Ceramic porcelain

Rayan porcelain ceramics are one of the most high-quality and durable products. The white clay used in this type of ceramic, is made under pressure which makes porcelain stronger than other ceramic tiles and has a higher price than glazed tiles.

Specifications of this product :

- Water impermeability
- High chemical resistance
- Anti-stain properties
- High abrasion resistance
- Hard scratch-resistant surface
- High diversity
- Fire resistant

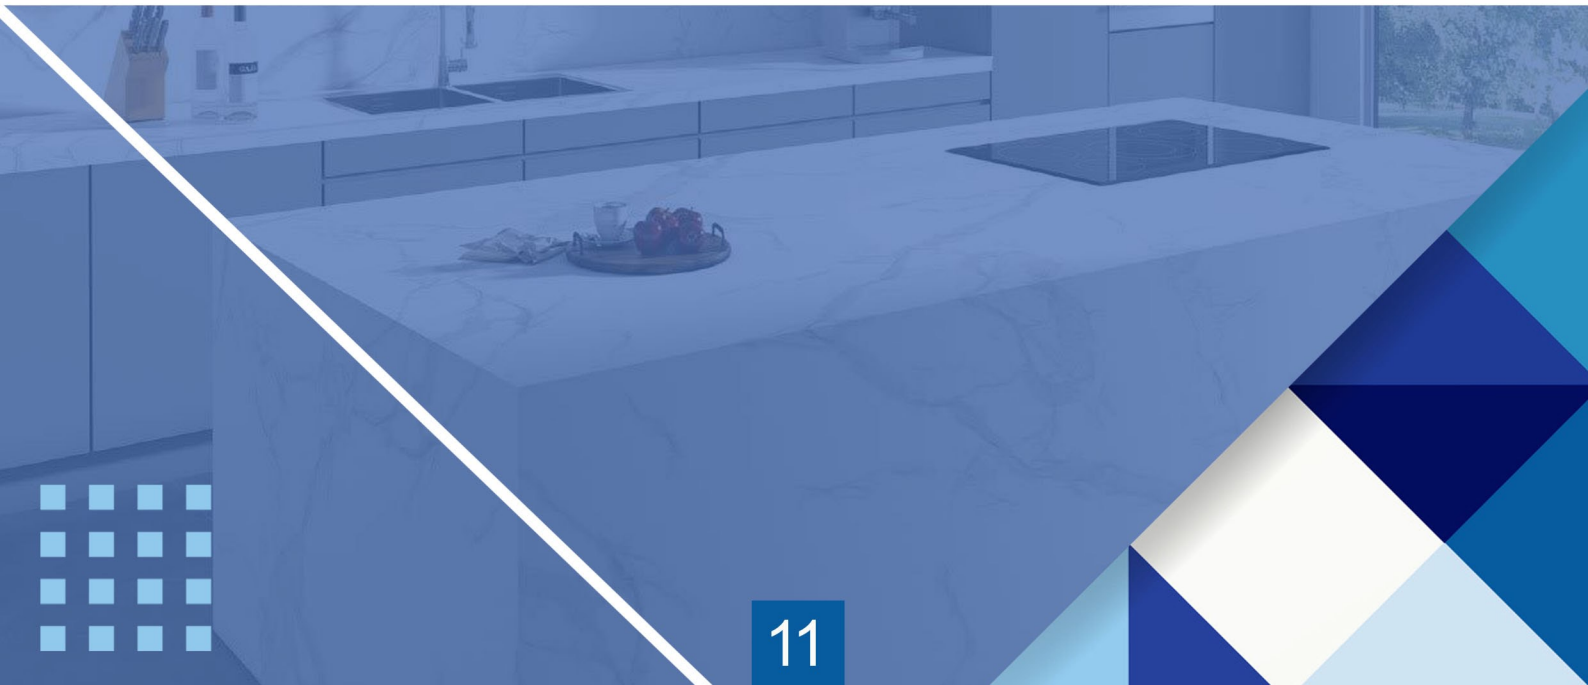

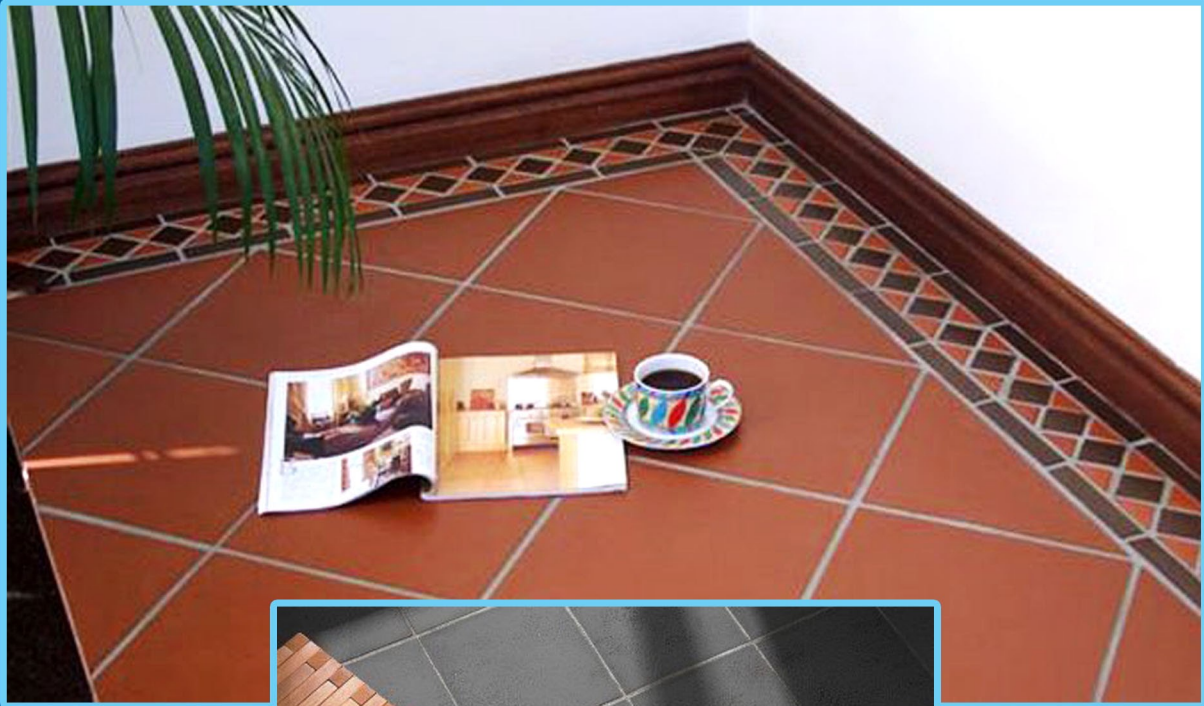

Ceramic glass

Glass ceramics are produced during the process of solidifying an object and making it look like glass. Ceramics produced with this method have very low porosity and are stain resistant. This type of ceramic is strong and durable and it is good alternative for granite and marble.

Quartz ceramics

Crushed stones glued together in order to produce this type of ceramic. If marble is used in the process of making this product, it is also called engineered marble. Engineered marble is used in interior floors and walls, and quartz ceramics are mostly used for kitchen cabinet walls and counter tops.

Quarry ceramics

They are produced by extruding clay or shale or mosaic. These mosaics are traditionally produced in red and gray and unglazed. These tiles (Quarry unglazed mosaic) are highly slip-resistant surface.
